## Cybersword

Cybersword is a content management system for Oracle and Microsoft SQL Database. This software enables content to be dynamically generated for websites. Verve worked with Cybersword's developers to create an intuitive interface for the software.

A stylised sword was created incorporating a tick to symbolise the right choice and dynamic power. This two colour identity has been applied to software, packaging and advertising.

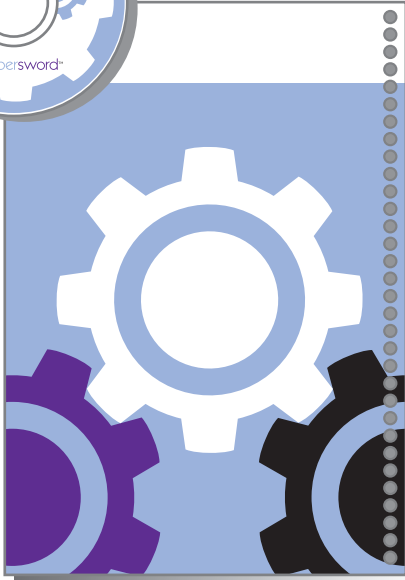

The interface features a set of icons created to compliment the identity. Effective use of icons enhances the user experience and makes a clear uncluttered interface. An icon can be used instead of a full text description for a button saving precious screen space.
